**The table below provides a summary of the key specifications of the Dome & Dome Houses.**

DIAM. & MODEL	HEIGHT	SQ.FT.	WEIGHT	MATERIAL
20' Dome house	12'	314	1200 lbs.	Fibreglass
17' Dome house	10'	226	800 lbs.	Fibreglass
14' Dome house	8'	154	400 lbs.	Fibreglass

- The Dome & Dome house is a unique, frameless structure made of moulded panels that offers the structural flexibility of a tent with the rigidity of a standard building.
- The insulated Dome & Dome house features a special sandwich construction that provides a high degree of insulation.
- The Domes have a very high degree of resistance against damage by earthquake.
- All models are rustproof, rainproof and provide excellent shelter from all natural elements.
- It can be assembled and taken down repeatedly without losing its structural integrity.
- Its panels are pre-drilled, threaded and sanded to close tolerances for ease construction.
- Panels are attached to each other with rustproof nylon zytel nuts, bolts and watertight gaskets.
- The Dome & Dome house is available in models with 20', 17' and 14' diameters.
- The basic dome is a bare wall model; however, architect's plans are available to help buyers build a wide variety of internal options from multiple interior rooms, storage lofts to kitchens, baths or office space.
- With a sufficiently large order, domes can be produced in special colours according to the clients requirements.
- The fibreglass Dome & Dome house is made of 1/8th-inch panels with a 5 mil gel coat inside and out that eliminates maintenance beyond an occasional washing or waxing.
- Each dome comes with one door and can accommodate up to five windows.
- Doorways can also be used as connectors between domes can be joined into a modular cluster. Dome & Dome houses are mounted on concrete, wooden decking or bare earth.
- A specially engineered, low cost, insulated flooring system is in development.
- The Domes are very resistant to water and can even be stored underwater or in high humidity conditions.
- Maintenance is simply a matter of washing with soap and water.
- Electrical supply may be provided from common external source or smaller wattage "internal" sources such as 12-volt batteries, solar panels and wind-generated accessories.
- Fire resistance factors can be extrapolated from the known characteristics of the materials utilized for production.
- All fibreglass-constructed enclosures are capable of having a Class 1 or Class A rating.
